Shipra Rode

Bachelor of Technology
Computer Engineering
Usha Mittal Institute of Technology, Mumbai
Duration of Study: 2023-2027 (4 years) | Current CGPA: 9.39

Introduction

Data-driven Computer Engineering undergraduate skilled in Excel, SQL, and Python with experience analyzing operational datasets, building dashboards, and deriving insights to support data-driven business decisions and performance optimization.

Education

B.Tech., Computer Engineering — **CGPA : 9.39 | 2027**
Usha Mittal Institute of Technology, Mumbai

Senior Secondary (HSC) — **74.33% | 2023**
R P Jr College Of Arts, Science & Commerce

Secondary (CBSE) — **92.40% | 2021**
Rahul International School

Experience

Content Strategist at GDG UMIT — *2025-26*
Collaborating with cross-functional technical teams to design and communicate developer-focused initiatives.

Data Science Intern at Prodigy InfoTech [Certificate] — *July - August 2025*
Performed data cleaning, exploratory analysis, and feature engineering on structured datasets using Python. Generated visual insights and summary statistics to support analytical reporting and decision-making.

Social Media & Graphics Head at SNDT ACM-W — *2024-25*
Led ACM-W SNDT's social media initiatives, boosting engagement by 40% and introducing 100+ students to tech through HoC'24.

Projects

INTERVISTA – AI-Based Interview Evaluation & Skill Gap Detection Platform- Ongoing — *February 2026* []
Python, FastAPI, NLP, LLM APIs
- Built an AI system that analyzes candidate interview responses using speech-to-text and NLP to evaluate correctness, depth, and clarity.
- Designed analytics pipelines to identify skill gaps and generate adaptive learning modules for targeted interview preparation.

Sales & Product Performance Dashboard — *January 2026* [Tableau]
Tableau, Excel
- Built an interactive Tableau dashboard to analyze sales trends, product performance, and regional revenue distribution.
- Applied Pareto (80/20) analysis and KPI filtering to identify key revenue drivers and growth opportunities.
- Enabled business users to quickly identify top-performing products and revenue contributors.

Leaf Disease Detection — *October 2025* []
Python, TensorFlow, Streamlit
- Developed a data preprocessing pipeline and trained an image classification model for plant disease detection.
- Deployed a Streamlit interface to visualize predictions and enable real-time model interaction.

US Accidents Data Analysis — *July 2025* []
Python, Pandas, Matplotlib
- Conducted exploratory analysis on a 7M+ record dataset to identify temporal and geographic accident trends.
- Engineered features and generated visual insights to highlight high-risk regions and peak accident intervals.
- Produced analytical visualizations supporting data-driven traffic risk assessment.

Skills

Data Analysis: Excel (Pivot Tables, VLOOKUP), SQL, Python (Pandas, NumPy)
Visualization: Tableau, Matplotlib, Plotly
Analytics: Data Cleaning, Exploratory Data Analysis, KPI Tracking, Trend Analysis
Programming: Python, SQL, C++, Java
Tools: Jupyter Notebook, Google Colab, GitHub

Achievements

- Participant, HackFusion Hackathon 2026 by IEEE UMIT & IEEE SPIT; built a creative travel-planning app.[Certificate].
- Completed Data Analytics Job Simulation with hands-on tasks in EDA, forensic tech, and real-world data analysis.[Certificate].
